## Table of Contents

<b>List of Authors</b>		<b>ix</b>
<b>Preface</b>		<b>xiii</b>
<b>Chapter 1</b>	<b>Space Domain Awareness (SDA)</b>	<b>1</b>
1.1	Introduction to Space Domain Awareness	6
1.2	Setting the Stage	12
1.3	Context for Space Domain Awareness	16
1.4	Functional Needs for Space Domain Awareness	20
1.5	Challenges	28
<b>Chapter 2</b>	<b>Strategy and Tactics for Space Domain Awareness (SDA)</b>	<b>33</b>
2.1	SDA Framework Model	34
2.2	SDA Information Strategy	37
2.3	SDA Synthesis and Analysis	49
2.4	Applied SDA Strategy	66
2.5	Summary	82
<b>Chapter 3</b>	<b>Characterization of the Space Environment</b>	<b>83</b>
3.1	Introduction	83
3.2	Dynamical Modeling	86
3.3	Summary	104
<b>Chapter 4</b>	<b>Space Object Motion and Events</b>	<b>109</b>
4.1	Causes of Actual Motion	110
4.2	Reference Frames and Coordinate Systems	111
4.3	Orbital Representations and Equations of Motion	116
4.4	Attitude Representations and Equations of Rotational Motion	126
4.5	Satellite Conjunction Assessment	129
4.6	Brief Summary on Causes of Perceived Motion	146

<b>Chapter 5</b>	<b>Sources of Information (Hard and Soft Inputs)</b>	<b>151</b>
5.1	Introduction (Noise, Incompleteness, Bias, Corruption)	151
5.2	Physics-based (Hard Inputs)	152
5.3	Human-based (Soft) Inputs	211
5.4	Structured and Unstructured Information	212
5.5	Standards, Calibration, and Meta Data	212
5.6	The Importance of “Independent Observations” and Big Data	213
<b>Chapter 6</b>	<b>Information Organization, Storage, and Management</b>	<b>219</b>
6.1	Data Science and Data Management	219
6.2	Ontologies for Space Domain Awareness	227
6.3	Collecting Data from Text: Information Extraction and Natural Language Processing	231
6.4	From Data to Discovery	241
6.5	Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness:	243
<b>Chapter 7</b>	<b>Uncertain Data Representation</b>	<b>265</b>
7.1	Frame of Work	266
7.2	Do We Always use Probabilities to Describe Random Systems?	267
7.3	An Example Problem: Assessing Collision Risks in the Conjunction Plane	269
7.4	The Estimation Framework for Outer Probability Measures	273
7.5	Revisiting the Collision Assessment Example	280
<b>Chapter 8</b>	<b>Space Domain Awareness and Decision-Making for Flight Safety, Environmental Sustainability, and Security</b>	<b>285</b>
8.1	Context	286
8.2	Decision Levels, Authorities, and Information Needs	289
8.3	Space Domain Awareness for Space Traffic Management	292
8.4	Space Domain Awareness for Space Command and Control	295
8.5	Summary	299
<b>Chapter 9</b>	<b>End to End ArgusSat Example</b>	<b>303</b>
9.1	Overview	303
9.2	Define Needs, Goals, and Objectives	307
9.3	Mission Characterization	312
9.4	Mission Evaluation	317
9.5	Results of Trades and Analyses	318
9.6	Detailed Subsystem Design	349
9.7	Final Spacecraft Sizing	353

9.8	Operations Planning	353
9.9	Cost Modeling	354
9.10	Multiple Sensor Satellite Design	354
9.11	Summary	356
<b>Chapter 10</b>	<b>Space Object Identification: Fuse, Use, Analyze, and Inform</b>	<b>361</b>
10.1	Introduction	368
10.2	Setting the Stage—Scenario for the Art of the Possible	371
10.3	Context	375
10.4	Process	378
10.5	Functional Needs	382
10.6	Challenges and Gaps: Sensor and Systems	386
10.7	Gap Analysis Solutions and Possibilities: Sensor and Systems	388
10.8	Summary	395

# Space Domain Awareness

## Authors and Editors

**Marc J. Berkowitz.** Director, Strategic Planning, Lockheed Martin Corporation, Bethesda, Maryland. Chapter 8—*Space Domain Awareness and Decision-Making for Flight Safety, Environmental Sustainability, and Security.*

**Francis Chun.** Professor and Director, Center for Space Situational Awareness Research, Department of Physics and Meteorology, U.S. Air Force Academy, Colorado Springs, Colorado. Ph.D. (Geophysics and Space Physics), University of California Los Angeles. Section 5.2.1—*Polarimetry for SDA.*

**Kathleen Coderre.** Deputy Manager, Deep Space Exploration Advanced Programs, Lockheed Martin Space, Denver, Colorado. M.S. (Space Systems Engineering), Stevens Institute of Technology; B.S. (Aeronautical and Mechanical Engineering) Rensselaer Polytechnic Institute. Chapter 9—*End to End ArgusSat Example.*

**Emmanuel Delande.** Space Surveillance Specialist, Centre National d'Études Spatiales, Toulouse, France. Ph.D. (Signal Processing), Ecole Centrale de Lille; M.S. (Signal Processing), Ecole Centrale de Lille; B.S. (Engineering), Ecole Centrale de Lille. Chapter 7—*Uncertain Data Representation.*

**Maria Esteva.** Research Scientist, University of Texas at Austin's Advanced Computing Center, Austin, Texas. Ph.D. (Information Science), University of Texas at Austin; M.S (Information Science and Advanced Certificate in Preservation Administration), University of Texas at Austin; B.S., University of Buenos Aires. Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness.*

**Carolyn Frueh.** Associate Professor, Purdue University, Lafayette, Indiana. Ph.D. (Physics; Astronomy), University of Bern; M.Sc. (Physics), Karlsruhe Institute of Technology. Chapter 4—*Space Object Motion and Events.*

**John Garnham.** Director, Laser Communications Division, Blue Halo, Albuquerque, New Mexico. Ph.D. candidate (Electrical Engineering), University College London; B.S. (Physics/Math), Syracuse University. Chapter 5—*Sources of Information (Hard and Soft Inputs).*

**Amit Gupta.** University of Texas at Austin's Advanced Computing Center, Austin, Texas. Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness.*

**Matthew D. Hejduk.** Senior Project Leader, the Aerospace Corporation, Woodway, Texas. President, Astrorum Consulting LLC, Woodway, Texas. Ph.D. (Philosophy), University of Dallas; M.T.S. (Theology), Southern Methodist University; B.S.E. (Mechanical Engineering), Princeton University. Section 4.5—*Satellite Conjunction Assessment*.

**J r mie Houssineau.** Assistant Professor, University of Warwick, Kenilworth, England. Ph.D. (Statistical Signal Processing), Heriot-Watt University; M.S. and B.S. (Mathematical Modelling), Universit  de Bordeaux. Chapter 7—*Uncertain Data Representation*.

**Shiva Iyer.** Oden Institute for Computational Engineering and Sciences at University of Texas at Austin, Austin, Texas. M.S. (Aerospace), University of California Los Angeles; B.S. (Aerospace), University of Michigan. Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness*.

**Moriba Jah.** Associate Professor, Aerospace Engineering and Engineering Mechanics Department, Mrs. Pearlie Dashiell Henderson Centennial Fellowship in Engineering, the University of Texas at Austin. Co-Founder and Chief Scientist, Privateer Space Inc. Ph.D. (Aerospace Engineering Sciences), University of Colorado Boulder; M.S. (Aerospace Engineering Sciences), University of Colorado Boulder; B.S. (Aerospace Engineering), Embry-Riddle Aeronautical University. Chapter 1—*Space Domain Awareness (SDA)*, Section 5.4—*Structured and Unstructured Information*, Section 5.5—*Standards, Calibration, and Meta Data*, Section 5.6—*The Importance of “Independent Observations” and Big Data*, Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness*.

**Peter Jansen.** Assistant Professor, School of Information, University of Arizona, Tucson, Arizona. Ph.D. (Cognitive Modeling), McMaster University; B.I.S. (Physics, Computer Science, Cognitive Science), University of Waterloo. Chapter 6—*Information Organization, Storage, and Management*.

**Shawana P. Johnson.** President, Global Marketing Insights, Inc. Ph.D. (Management Economics), Weatherhead School of Management at Case Western Reserve University; Chapter 10—*Space Object Identification: Fuse, Use, Analyze, and Inform*.

**Rex Kiziah.** Permanent Professor and Head, Department of Physics and Meteorology, U.S. Air Force Academy, Colorado Springs, Colorado. Ph.D. (Nuclear Physics), the University of Texas at Austin; B.S. (Physics), U.S. Air Force Academy. Section 5.2.1—*Polarimetry for SDA*.

**Wiley J. Larson.** Director, Space Mission Analysis and Design Program, U.S. Air Force Academy, Colorado Springs, Colorado. D.E. (Spacecraft Design), Texas A&M University; M.S. (Electrical Engineering), University of Wyoming; B.S. (Electrical

Engineering), University of Wyoming. Editor; Chapter 1—*Space Domain Awareness (SDA)*; Chapter 9—*End to End ArgusSat Example*.

**Donald A. Lewis.** Principle Director (retired), the Aerospace Corporation, Redondo Beach, California. Ph.D. (Environmental Science and Engineering, Environmental Engineering) University of California, Los Angeles; MBA (Marketing and Finance), UCLA Anderson School of Management; M.S. (Biology: Environmental Biophysics), University of California, Los Angeles; B.S. (Zoology), University of California, Los Angeles. Chapter 2—*Strategy and Tactics for Space Domain Awareness (SDA)*.

**Pamela D. Magee.** Director of Online Learning and Associate Professor, Teaching Science and Technology, Inc., President, PDM Aerospace LLC, Manlius, NY. M.S. (Aerospace Engineering), University of Tennessee; B.S. (Astronautical Engineering), U.S. Air Force Academy. Editor; Chapter 9—*End to End ArgusSat Example*.

**Marilyn McQuade.** Technical Editor.

**Maarten Meerman.** Principal Mission Architect, MAXAR, Palo Alto, California. B.Eng. (Electrical Engineering), Amsterdam University of Applied Sciences. Chapter 9—*End to End ArgusSat Example*.

**Jim Shell.** Space Surveillance (SSA/SDA) & orbital debris Subject Matter Expert, Novarum Tech LLC. Ph.D. (Imaging Science), Rochester Institute of Technology; M.S. (Physics), Wright State University; B.S. (Physics), U.S. Air Force Academy. Chapter 1—*Space Domain Awareness (SDA)*; Chapter 5—*Sources of Information (Hard and Soft Inputs)*.

**Nevan Simone.** Oden Institute for Computational Engineering and Sciences at University of Texas at Austin, Austin, Texas. M.Sc. (Aerospace Engineering), the University of Texas at Austin. Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness*.

**Timothy M. Stratman.** President, Kestrel Corporation, Albuquerque, New Mexico. Owner, TIMSCO, Corrales, New Mexico. M.S. (Geography, Remote Sensing and Geospatial Information), Texas A&M University; B.S. (Engineering Technology), University of Houston; B.S. (Occupational Education, Minor: Business Administration), Wayland Baptist University. Chapter 10—*Space Object Identification: Fuse, Use, Analyze and Inform*.

**Roger Tippets.** Department of Physics and Meteorology, U.S. Air Force Academy, Colorado Springs, Colorado. Section 5.2.1—*Polarimetry for SDA*.

**Ramona L. Walls.** Associate Director of Data Science, Data Collaboration Center, Critical Path Institute, Tucson, Arizona. Assistant Research Professor, Bio5 Institute,

University of Arizona, Tucson, Arizona. Ph.D. (Ecology and Evolutionary Biology), Stony Brook University; B.S. (Environmental Resource Management), Penn State University. Chapter 6—*Information Organization, Storage, and Management*.

**Michael Warren.** Co-Founder & CTO, Descartes Labs, Los Alamos, New Mexico. Ph.D. (Physics), University of California Santa Barbara; B.S. (Physics, Engineering & Applied Science), Caltech. Chapter 10—*Space Object Identification: Fuse, Use, Analyze, and Inform*.

**Ryan M. Weisman.** Research Aerospace Engineer, Air Force Research Lab, Albuquerque, New Mexico. Ph.D. (Aerospace Engineering), Texas A&M University; M.S. (Mechanical Engineering) Rochester Institute of Technology; B.S. (Mechanical Engineering) Rochester Institute of Technology. Chapter 3—*Characterization of the Space Environment*.

**Weijia Xu.** Research Scientist, Group Manager, Scalable Computational Intelligence Group, Texas Advanced Computing Center, the University of Texas at Austin. Ph.D. (Computer Science), University of Texas at Austin; M.A. (Life Science), University of Texas at Austin; B.S. (Biochemistry & Molecular Biology) Peking University. Section 6.5—*Criticality of Multi-Source Information Modeling, Engineering, and Curation for Space Domain Awareness*.

**Marek Ziebart.** Professor of Space Geodesy, Director, Space Geodesy and Navigation Lab, Vice Dean (Research), University College London, London, England. Chapter 4—*Space Object Motion and Events*.

## Preface

In 2022, more than 80 countries have civil space agencies, and about one-third of them also have military interests in space. Hundreds of corporations around the globe offer space-related products and services. All these organizations—civil, commercial, and military are exploiting or hoping to exploit the many advantages of space.

We've titled this book *Space Domain Awareness* (SDA) to distinguish it from space situational awareness (SSA), which, according to the US Space Foundation, “refers to the ability to view, understand and predict the physical location of natural and man-made objects in or around Earth, to avoid collisions.” A related term common in the literature is space traffic management (STM), which we define as “the set of technical and regulatory provisions and processes used to oversee, coordinate, regulate, and promote safe and responsible space activities.”

Our working definition of space domain awareness focuses on SDA practitioners—organizations responsible for maintaining space domain awareness. **Space domain awareness is the actionable knowledge required to predict, avoid, deter, operate through, recover from, and attribute the cause to losing or degrading space capabilities and services.**

In essence, SDA practitioners establish a baseline of objects in Earth orbit, note changes to the baseline, understand what changed and why, assess possible outcomes due to the change, and determine a course of action to deal with the change, if necessary. The space objects in the baseline may range in size from entire space stations to golf-ball-sized (or smaller) objects, including functional spacecraft, non-functional spacecraft, and to some extent natural and artificial debris that could threaten functional spacecraft. We use the term resident space object (RSO) to denote objects of interest to SDA practitioners.

This book aims to provide an overview of space domain awareness and establish basic principles, philosophies, and approaches that are useful to conduct SDA operations. These operations include, but are not limited to, detecting, identifying, tracking, and characterizing objects and their behaviors; detecting changes associated with selected RSOs; and potentially mitigating threats.

Space operators face many threats, ranging from on-board anomalies, space weather events, potential collisions, inadvertent re-entry, radio frequency interference, and actions taken by well-meaning operators or nefarious actors.

## Personal Perspective

For me, this book is a dream come true. After 40 years of working in the space community, we persuaded the “best-of-the-best” thought leaders in space operations to

contribute their wealth of experience and lessons learned to this project. This is good for me, but REALLY good for you because you'll benefit from the 200-plus years (that's over two centuries!) of collective experience in operating space systems.

Several very talented individuals have provided the leadership of this project over the last 30-plus years! I wish to express my deepest gratitude to Brigadier Generals Bob Giffen, Mike DeLorenzo, and Marty France for their vision and persistence in leading this community effort. Lieutenant Colonel Mark Charlton and later Colonel Luke Sauter supplied the hands-on leadership to make this SDA book a reality. Thank you!

*Space Domain Awareness* is the 30th book in the Space Technology Series. Most of the other titles within the Series support SDA: *Understanding Space*; *Space Mission Analysis and Design*; *Human Spaceflight*; *Space Propulsion Analysis and Design*; *Space Launch Systems Design and Operations*; *Space Mission Operations*; *Applied Space Systems Engineering*; *Applied Project Management for Space Systems*, and others provide necessary background information that supports the development of SDA practitioners.

Here I must recognize the forbearance and suffering of the numerous contributing authors, artists, and editors of this text. They have outlined, drafted, reorganized, reviewed, and re-crafted their material for six years to suit the editors' demands. This book would not be possible without their expertise, persistence, and patience. As editors, our goal has been to create a useful, professional book of which the authors can be proud.

The true heroes of this effort are Anita Shute, Marilyn McQuade, Linda Gentsch, and Mary Tostanoski. As a team, they edited every word and did everything necessary to create a camera-ready copy that truly represents the quality of the author and editor team. Anita Shute personally entered and formatted every page of the book, as she has done for 27 others. Marilyn McQuade spent untold hours reviewing, editing and updating the draft of the book. Mary Tostanoski created initial drafts of graphics and dealt with the myriad modifications. Linda Gentsch powered through all issues for years to format this eBook using the Habitat System provided by Inkling. Thank you all for your dedication and excellence!

For me, the joy of this endeavor was greatly enhanced by my two exceptional co-editors: Pamela Magee and Moriba Jah. They dedicated themselves to working with their teams to write this book and made the six years stimulating and enjoyable! Many of the authors have expressed their gratitude for the editorial team's leadership, insights, and wisdom.

Finally, I want to express my heartfelt appreciation to my family and friends for their unswerving support and encouragement while suffering my dream with me!

The authors and editors of *Space Domain Awareness* hope that our colleagues, young and old, will find this book useful in preparing to meet the challenges ahead in managing space operations for national defense, civil application, and commercial enterprise.
